I believe that as a consumer of products on hand and in the air wave that I believe that without the help of the XM instant traffic and weather. I really don't know where I would be. There have been many time when I was driving in my car when in the distants that I have seen every dark clouds and changed the channel on my XM in my car and was able to avoid the bad weather. Not to mention the many of times that it help me miss the bad traffic on my way to work which I might have lost if I did not have the XM with me. I believe that it is the right for XM to have a traffic and weather station, and I personally do not believe that they are brakeing any laws. Or would be hurt anybody in the process. If anything I think that they are helping millions of people with the service of having the the traffic and weather station. So with that I oppose HR 4026!!!
